

The weave design software is the designer's tool to build dobby or jacquard fabrics in a creative way, without technical requirements.

#### Simplified weaving

Pointcarré has developed the weave design software to allow converters and design offices to use their time to create, leaving the technical aspects to the manufacturers.

#### Color

Color is the heart of Pointcarré. We guarantee the colors you use to be the same throughout the creation and development process.

#### Photorealistic simulations

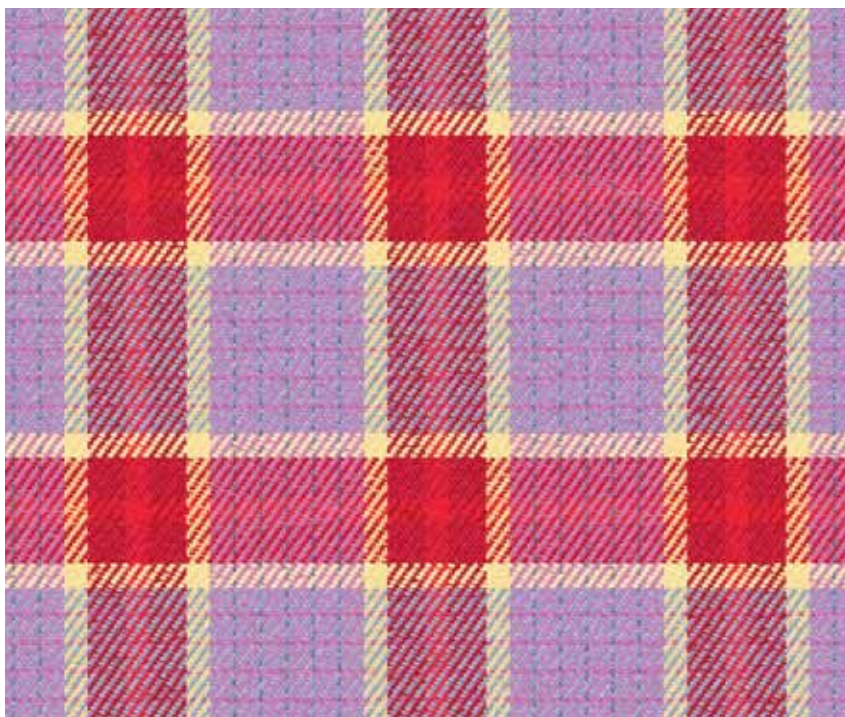

The quality of the Pointcarré simulation is recognized by prominent textile designers. It is a must-have tool for the presentation of your seasonal collections.

#### Colorway variations

In a weave design, you can define colorways for the warp and the weft and edit the weave blanket. Choose on screen the simulations you wish to add to your portfolio.

#### Warp color, weft color

The warp and weft color can be drawn directly on the cloth or entered as end-by-end or in measure unit formulas. Quickly create plaids and stripes that adhere the cloth densities.

**Jacquard design**

Each weave is assigned to a color in a design. Pointcarré calculates the cloth for you. From the same design, you can experiment with a wide variety of woven effects.

**Simulation that fits**

Its easy to create quick and accurate woven simulations using any kind of yarn (boucle, chenille, slub, twisted ...). Irregular densities are taken into account when simulating.

**Color and yarn libraries**

The software comes with a yarn and palette library. You can reference the colors of your yarns and use them directly in your designs.

**Weave libraries**

The software comes with an 800 weave library that you can enrich with your own weaves. For an even greater selection, you can order the 4000 Weaves CD-ROM. Pick a weave from the library and drag and drop it on the cloth file to change the weave.

**Spec sheet**

From Pointcarré you can print a spec sheet of the cloth to be used at the mill.

**Service**

The Pointcarré software comes with a complete set of customized services:

- On-site training
- Regular updates of the software
- Online help and technical support
- Invitation to the annual user group meeting
- Access to the customer restricted area of the Pointcarré web site (version downloads, tutorials and tip sheets)
